Professional Summary

A Software Engineer specializing in Full-Stack development, systems architecture, and backend integrations, certified in Full-Stack Development, System Design, and n8n Integrations.

Work Experience

Full Stack Software Engineer at [Atad Digital](#), Riyadh, Saudi Arabia

February 2026 - August 2026

Engineered comprehensive full-stack solutions for the Zamn platform by bridging backend API integrations with frontend performance optimization. Developed scalable workflow automations, deployed intelligent AI support systems, and managed robust disaster recovery architectures within an Agile environment.

- Spearheaded full-stack performance and SQL/NoSQL database optimization by refactoring the codebase and restructuring queries, achieving an 86% reduction in network rendering requests (from 1,200+ down to 165).
- Engineered automated n8n workflows integrating Zoho and Calendly RESTful APIs, reducing manual administrative tasks by 90%.
- Deployed a RAG-powered AI support agent, effectively decreasing customer inquiry response times by 99%.

Programmer Intern at [42kl](#), Kuala Lumpur, Malaysia

August 2024 - October 2024

Mastered C programming and UNIX systems through an intensive coding bootcamp. Collaborated with peers to engineer low-level and mid-level solutions, detect errors, debug code, and solve complex technical challenges in a fast-paced environment.

- C Programming, UNIX.

Technical Projects

UMPSA Community Platform

Built a responsive full-stack community web application utilizing MongoDB, Express.js, React, and Node.js, executing comprehensive User Acceptance Testing (UAT). Configured real-time server monitoring and CI/CD automated patch deployments utilizing Render, UptimeRobot, and AWS Cloud to ensure high system availability.

- MongoDB, Express.js, React, Node.js, Postman, AWS, CI/CD.

Preacher Monitoring Management System

Architected a cross-platform Flutter application to digitize operations for religious organizations. Integrated a real-time Firebase backend to securely manage preacher scheduling, activity tracking, and automated payments, effectively replacing manual administrative workflows.

- Flutter, Firebase, Cross-Platform Architecture, UI/UX Implementation.

EasyOrder Website

Built a responsive Laravel and Bootstrap food ordering platform streamlining menu navigation, order placement, and transaction management.

- Laravel, Bootstrap, MySQL.

Shipping and Delivery System

Developed a comprehensive Shipping and Delivery System using Java and an OOP approach to streamline logistics and delivery operations across multiple product categories.

- Java, OOP.

TranslateLingo Bot

Engineered an asynchronous Telegram bot backend using Python, FastAPI, and aiogram. Containerized the modular application with Docker and deployed it via Render for seamless, isolated environment execution.

- Python, FastAPI, Render, Docker.

Languages

Arabic - Native

English - Fluent

Certificates

Back End Development and APIs from FreeCodeCamp

Full-Stack Development 101 from Simplilearn

System Design and Architecture from Manara

Databases from Manara

Fundamentals of Communication from upGrad KnowledgeHut

Advanced Prompt Engineering with ChatGPT from upGrad KnowledgeHut

Emotional Intelligence and Leadership from Edraak

Emotional Intelligence and One's Self from Edraak

Integrations: APIs & Connected Workflows from n8n

Essentials: Your First Workflows from n8n

In Practice: AI, Testing & Best Practices from n8n

n8n Quickstart from n8n

Skills

Technologies: MongoDB, Express.js, React, Node.js, Laravel Framework, Flutter, Postman, Git, GitHub.

Technical Skills: Planning, Developing, Testing, Deploying, Debugging, Databases, Documenting.

AI Tools: Claude, Cursor, Copilot, Gemini-CLI, Figma AI.

Education

**Bachelor of Computer Science Software Engineering (with honours) at
University Malaysia Pahang Al-Sultan Abdullah, Malaysia**

October 2022 - August 2026
